

Jeweler Studio

How we talk about who we are, what we do, and why it matters.

This document is the source of truth for how Jeweler Studio is described in every external communication — sales emails, demos, decks, social posts, website copy, conference pitches, partner intros, investor conversations.

If you are speaking on behalf of Jeweler Studio, the language in this handbook is the language you use. The proof points in this handbook are the proof points you cite. Deviation is okay when it is tighter; deviation is not okay when it weakens.

When in doubt: pain first, mechanism second, proof third.

Contents

This handbook is being built in sequence. Sections marked complete are ready to use today. Sections marked in-progress are coming next.

Section 1. Brand Core — *Complete*

Section 2. Positioning & Messaging Architecture — *Coming next*

Section 3. Voice & Tone — *Coming next*

Section 4. The Proof Stack — *Coming next*

Section 5. The Loss-Aversion Playbook — *Coming next*

Section 6. Feature Marketing — *Complete*

Section 7. Audience Variants — *Planned*

Section 8. Approved & Banned Language — *Planned*

Section 9. Templates — *Planned*

Section 10. Appendix: The Sell Line Formula — *Planned*

Brand Core

The non-negotiable foundation. Every email, deck, post, and pitch ladders up to what is in this section. If something in our marketing contradicts this section, the marketing is wrong, not the section.

1.1 Mission

Building the backbone of the custom industry, starting by streamlining custom jewelry.

1.2 Vision

A world where any custom product, starting with jewelry, moves from a customer's idea to a paid deposit in minutes, not weeks. Where the jeweler designs and closes, instead of chasing and guessing.

1.3 The Founding Insight

Jeweler Studio was built inside a jewelry studio, not a tech incubator.

Our founder Raf spent years as a designer and partner inside a working jewelry business, scaling it 3x. Every custom order followed the same broken pattern: a customer would walk in or message with a vague idea, and the jeweler would burn hours — sometimes days — pulling the vision out of their head with sketches, mockups, and back-and-forth. Half the time, the customer ghosted before the deposit ever landed. The work was done. The money wasn't.

Our CTO Alan was solving a parallel problem from the manufacturing side, running a jewelry wholesale operation and applying AI to streamline production.

Jeweler Studio is what happens when a jeweler who lived the design-phase bottleneck and an engineer who lived the production-phase bottleneck build the platform they both wished existed.

This is the line that wins us deals our competitors can't: *We didn't build AI and look for jewelers to sell it to. We were the jewelers, and we built the AI we needed.*

1.4 The Enemy (What We Exist To Replace)

The design phase is where custom orders go to die.

Today, when a customer brings an idea to a jeweler, the jeweler becomes a translator, an artist, and a project manager all at once — fielding texts, building sketches, commissioning CAD, sending mockups,

waiting on responses, and rebuilding when the customer says “not quite.” It is the single most expensive, time-consuming, and unpredictable phase in the entire jewelry business.

And it happens before a single dollar has been collected.

We exist to delete this phase. Not improve it. Delete it. The customer should arrive at the jeweler's website with an idea and leave with a render, a quote, and a paid deposit — without the jeweler picking up the phone first.

1.5 Brand Promise

The custom order, finished — before the conversation starts.

1.6 Brand Pillars

Everything we say ladders to one of these three pillars.

- 1. Jeweler-Native.** Built by jewelers who lived the problem. We speak the language, know the workflow, respect the craft.
- 2. Workflow-First.** We don't sell AI. We sell a custom-order workflow that happens to be powered by AI. The jeweler is the hero, not the algorithm.
- 3. Embedded, Not Extracted.** We white-label and embed inside the jeweler's existing brand and website. We make them look better. We never compete with them for the customer's attention.

1.7 What We Are Not

We are not a Shopify plugin. We are not a render generator. We are not a template marketplace. We are not an AI tool the jeweler has to figure out how to use. We are not a design service the jeweler outsources to. We are the jeweler's own custom-order system, branded as theirs, running on their site.

Feature Marketing

Each feature: what it is, the pain it kills, the value it delivers, the one-sentence sell, and three ways to say it.

The Sell line is the full punch — use it when you have one shot to land the feature in writing (cold email, post hook, deck slide, demo intro). The three short lines are situational: workflow line for a jeweler who wants to understand what it does, transformation line for a jeweler who wants to feel the shift, punchline for the closer.

6.1 — Instant Jewelry Design

Feature: Customers (end-users) describe or upload an image or sketch of their desired piece. They see a photoreal render in seconds.

Pain: Days of back-and-forth trying to pull a vision out of the customer's head.

Value: Custom orders go from a week of guesswork to a minute of clarity.

The Sell:

What used to take a week of texts, sketches, and “Can we change this again?” now takes sixty seconds. Instant Jewelry Design turns a customer's idea into a render they can pay a deposit on, before the conversation even starts.

Three ways to say it:

- *From a sentence to a render in under a minute.*
 - *Your customer designs the piece. You close the sale.*
 - *The custom order starts and finishes before the first text.*
-

6.2 — Instant Quoting & Cost Breakdown

Feature: Auto-calculated material estimate the moment the design is finalized.

Pain: Hours spent pricing each custom piece by hand, often before a deposit is even on the table.

Value: Every lead arrives pre-quoted. The jeweler reviews and sends.

The Sell:

Every custom design arrives with the math already done. Instant Quoting breaks down the materials the moment the design is locked, so the only thing left for you to do is decide your margin and hit send.

Three ways to say it:

- *Quotes calculated the moment the design is locked.*
 - *Every lead arrives with the math already done.*
 - *Review the cost, set your margin, send the quote.*
-

6.3 — Lead Capture & CRM

Feature: Every design, customer, and quote lands in one dashboard, automatically.

Pain: Custom leads scattered across texts, DMs, emails, and sticky notes.

Value: One place. Every lead. Already organized.

The Sell:

Texts, DMs, sticky notes, screenshots — every custom lead you've ever lost died somewhere in between, and the CRM is the one place that finally puts every design, quote, and customer in front of you, already organized and fully automated.

Three ways to say it:

- *Every design, every quote, every customer in one place.*
 - *Wake up to leads that organized themselves overnight.*
 - *Your custom order pipeline, tracked from idea to deposit.*
-

6.4 — White-Label Embed

Feature: The full platform embeds in any jeweler's website, fully branded as theirs.

Pain: Third-party tools that look like third-party tools and break the brand.

Value: Customers never know it isn't yours.

The Sell:

Your brand spent years earning trust — Jeweler Studio embeds invisibly into your site in your colors, your fonts, your logo, so the customer experiences your brand from idea to deposit, never ours.

Three ways to say it:

- *Your brand. Your site.*
 - *Embedded in your website, invisible to your customer.*
 - *Built into your site, not thrown on top.*
-

6.5 — Automated Customer Engagement

Feature: Quotes, follow-ups, and lead engagement run on autopilot.

Pain: Custom leads going cold while the jeweler is busy doing the work in front of them.

Value: No lead ever falls through the cracks again.

The Sell:

While you're busy, your leads are already looking for attention from a different jeweler. Our automated engagement keeps every customer warm, quoted, and moving toward a deposit, so the work that pays you, doesn't cost you the work that doesn't.

Three ways to say it:

- *Quotes, follow-ups, and lead nurture running on autopilot.*
 - *Never lose a lead to a slow reply again.*
 - *The platform keeps every customer warm while you work.*
-

6.6 — 3D Engagement Ring Visualizer

Feature: Real-time 3D ring builder, fully CAD-ready.

Pain: Bridal customers who can't commit because they can't picture it.

Value: Every visitor sees the exact ring they're proposing with — before they buy.

The Sell:

A bride who can't picture the ring won't put down a deposit — our 3D visualizer lets her spin, customize, and fall in love with the exact piece she's proposing with, turning “I need to think about it” into “I'll take it.”

Three ways to say it:

- *From dream ring to deposit, in 3D.*
 - *They build it. They see it. They buy it.*
 - *Let her customize it, try it, fall in love — all on your website.*
-

6.7 — Built by Jewelers

Feature: Founded and built by a working jeweler and an AI engineer who ran jewelry wholesale.

Pain: Generic AI tools sold by people who've never closed a custom order.

Value: Every feature exists because we needed it ourselves.

The Sell:

Most AI tools are built by engineers guessing at your workflow — Jeweler Studio was built inside a working jewelry studio by a jeweler who lived the back-and-forth, which is why every feature solves a problem you'd actually recognize.

Three ways to say it:

- *Built by jewelers. For jewelers.*
 - *Every feature solves a problem we lived ourselves.*
 - *Designed by people who've sat across from your customer.*
-

6.8 — Live Onboarding (No Waitlist)

Feature: Onboarded and live on a jeweler's site within days.

Pain: Competitors who hide behind “invite-only” while jewelers wait.

Value: Available now. Selling this week.

The Sell:

While the rest of the industry sits on a waitlist, you can be live on your site within days — Jeweler Studio onboards now, not next quarter, and your custom orders start closing before your competitors get an invite.

Three ways to say it:

- *No waitlist. No gatekeeping. Live in minutes.*

- *Live on your site in minutes, closing custom orders today.*
 - *Ready when you are.*
-

6.9 — Transparent Tiered Pricing

Feature: Three published tiers — \$149, \$349, \$849.

Pain: “Contact us for pricing” software that wastes the jeweler's time.

Value: Pick a tier. Start selling.

The Sell:

No “contact us for pricing,” no discovery call gauntlet — three tiers are on the page at \$149, \$349, and \$849, and the only question left is which one fits the way you sell.

Three ways to say it:

- *Three tiers, three prices, all on the page.*
 - *Pick the tier that fits how you sell.*
 - *No discovery calls, no “contact us for pricing.”*
-

6.10 How the Team Uses These Lines

Each feature gives the team four weapons:

The Sell. The full punch. Use this when you have one shot to land the feature in writing.

Line 1 — Workflow. When the jeweler wants to understand what it does.

Line 2 — Transformation. When the jeweler wants to feel the shift.

Line 3 — Punchline. When the jeweler needs the closer.

The Sell line is what we want every team member to be able to deliver cold, on demand, for any feature, when asked. That is the standard.

6.11 The Sell Line Formula

Every Sell line in this handbook follows the same three-beat structure, just with different opening angles. When we ship new features, the team writes new Sell lines using this formula.

The three beats, in order:

Beat 1 — Pain. Name the workflow moment the jeweler recognizes.

Beat 2 — Mechanism. Name the feature and what it does.

Beat 3 — Value. Name what changes for the jeweler.

Six entry-point archetypes the team can lead with:

- Transformation contrast — “What used to take a week now takes a minute.”
- Math angle — “Every custom piece arrives with the math already done.”
- Failure list — “Texts, DMs, sticky notes, screenshots...”
- Brand-trust play — “Your brand spent years earning trust.”
- Tradeoff frame — “The work that pays you doesn't have to cost you the work that doesn't.”
- Industry callout — “While the rest of the industry sits on a waitlist...”

The pattern under all of them is still pain → feature → value. What changes is the entry point into the sentence.

What's Coming Next

This handbook is being built in sequence. Below is what each upcoming section will contain so the team knows what to expect.

Section 2 — Positioning & Messaging Architecture

The category we own, the elevator pitch (memorized by every team member), the tagline, the loss-aversion line, and the value pillars in market-ready language.

Section 3 — Voice & Tone

How we sound. The luxury-meets-jeweler-native balance, defined explicitly so a junior team member writes the same way the founder does.

Section 4 — The Proof Stack

Every metric, sourced and contextualized. Workflow proofs, logical proofs, quantitative proofs — and which to lead with in which room.

Section 5 — The Loss-Aversion Playbook

How to make the jeweler feel they are losing money by not working with us. Framing techniques, the cost-of-inaction model, and how to use the 85% stat without sounding aggressive.

Section 7 — Audience Variants

How the same message changes when speaking to a solo bench jeweler vs. a multi-store retailer vs. press vs. an investor. Same truth, different translation.

Section 8 — Approved & Banned Language

Words we always use. Words we never use. Claims we can make. Claims we cannot — until we have the data to back them.

Section 9 — Templates

Plug-and-play sales emails, demo openers, social posts, web hero copy, conference pitches.

Section 10 — Appendix: The Sell Line Formula

A full catalog of entry-point archetypes and worked examples, so the team can write Sell lines for new features without help.
